                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a purified single or two-chain polypeptide, which comprises the protease domain of a type-II membrane-type serine protease 7 (MTSP7) or its catalytically active portion. The polypeptide comprising MTSP7 is useful for detecting or diagnosing a neoplastic condition in a subject. This polypeptide is also useful for monitoring tumour (e.g. tumour of the breast, cervix, prostate, lung, ovary or colon) progress and/or therapeutic effectiveness. The inhibitor of the polypeptide or the inhibitor of the polypeptide's zymogen form is useful for treating or preventing a neoplastic disease, or tumour initiation, growth or progression, or a (pre-)malignant condition. The polypeptide or polypuctide is also useful for identifying modulators of MTSP7, which may be used to treat cancers or tumours. This sequence represents a protein of the type-II membrane-type serine protease 1 relating to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 855
                                                                                                                                                                                                                      601

                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC diagnostic and prognostic assays and furthermore in the treatment of CC diverse pathological conditions. The present invention describes novel human and murine NOVX proteins, as well as methods to modulate their CC expression using antisense oligos, ribozymes and peptide nucleic acids. CC The NOVX polypeptides, polynucleotides and antibodies are useful in CC treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, CC atherosclerosis, cancer and diabetes. Furthermore, they may be used in CC treating or preventing diseases such as inflammation, autoimmune CC disorders, allergies, blood disorders, acquired immunodeficiency syndrome CC (AIDS), obesity, asthma, immunoglobulin (Ig) an ephropathy, cirrhosis, carchinitis, Alzheimer's disease, infections, stroke, muscular dystrophy CC and epilepsy. Accordingly, these molecules have many activities including CC vcostatic, cardiant, antinflammatory, immunosuppressive, antialregic, CC haemostatic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic, CC neuroprotective, noortopic, antibacterial, virucide, antiparasitic, celasars and anticonvulsant. In addition, they are useful in screening CC assays to identify small molecules that modulate or inhibit, for example, CC used as in chromosome mapping, tissue typing, preventive medicine and CC used as in chromosome mapping, tissue typing, preventive medicine and CC of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

This invention relates to a novel nucleic acids, and encoded polypeptides CC thereof, which have properties related to the stimulation of biochemical CC or physiological responses in a cell, tissue, organ or organism. CC specifically, it refers to the use of biologically active fragments for cidagnostic and prognostic assays and furthermore in the treatment of CC disgnostic and prognostic assays and furthermore in the treatment of CC chuman and murine NOVX proteins, as well as methods to modulate their CC expression using antisense oligos, ribozymes and peptide nucleic acids. CC The NOVX polypeptides, polynucleotides and antibodies are useful in CC treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, CC atherosclerosis, cancer and diabetes. Furthermore, they may be used in treating or preventing diseases such as inflammation, autoimmune CC disorders, allergies, blood disorders, acquired immunodeficiency syndrome (AIDS), obesity, asthma, immunoglobulin (Ig)A nephropathy, cirrhosis, cratdiant, antinflammatory, immunosuppressive, antiallergic, antiastentic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic, cantiasthmatic, natinflammatory, immunosuppressive, antiallergic, antialergic, an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cd diagnostic and prognostic assays and furthermore in the treatment of cdiverse pathological conditions. The present invention describes novel chuman and murine NOVX proteins, as well as methods to modulate their cc expression using antisense oligos, ribozymes and peptide nucleic acids. The NOVX polypeptides, polymucleotides and antibodies are useful in cc treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, cc atherosclarosis, cancer and diabetes. Furthermore, they may be used in ctreating or preventing diseases such as inflammation, autoimmune cd disorders, allergies, blood disorders, acquired immunodeficiency syndrome cd disorders, allergies, blood disorders, acquired immunodeficiency syndrome cd disorders, allergies, blood disorders, acquired immunodeficiency syndrome cd disorders, allergies, infections, stroke, muscular dystrophy and epilepsy. Accordingly, these molecules have many activities including cytostatic, cardiant, antiinflammatory, immunosuppressive, antiallergic, chaemostatic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic, constructive, nootropic, antisathericic, hepatotropic, cantiallergic, relaxant and anticonvulsant. In addition, they are useful in screening cassays to identify small molecules that modulate or inhibit, for example, consideration, wound healing and anglogenesis. The nucleic acids are also used as in chromosome mapping, tissue typing, preventive medicine and coff the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The present invention describes a polypeptide comprising a purified single or two chain polypeptide, which comprises the protease domain of a type-II membrane-type serine protease (MTSP10) or its catalytically cative portion, or a mutein of it, where up to 50 % of the amino acids are replaced with another amino acid, and the resulting polypeptide is a single chain or two chain polypeptide that has a catalytic acitivity of at least 1-10 % of the unmutated polypeptide. WTSP10 has cytostatic cativity. The polypeptide containing the protease domain of the WTSP10 is useful for detecting a neoplastic disease, and for diagnosing the presence of a pre-malignant lesion, a madignancy, or other pathologic condition in a subject, or monitoring tunour (e.g. breast, cervix, prostate, lung, ovary or colon tumour) progression and/or therapeutic effectiveness. An inhibitor of the polypeptide containing the protease comain of MTSP10 is useful for treating or preventing meoplastic disease in a mammal. An inhibitor of the activation cleavage of the zymogen form of the WTSP10 polypeptide is useful for inhibiting tumour initiation, carvit in the e.g.
                                                                                                                                                                                                                                                                                                                                                               New polypeptides comprising the protease domain of a type-II membrane-
type serine protease (MTCP10), or its muteins, useful for diagnosing
neoplasms or malignancies, or for screening for MTCP10 inhibitors for
treating such diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14-MAY-2001; 2001US-0291001P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-MAY-2002; 2002WO-US015332.

The invention also relates to a method using CVSP17 protein to identify compounds that modulate its protease activity. The method is useful for preventing, diagnosing and treating disorders related to the serine protease 17 activity, such as tumour conditions and/or cancer, particularly of the breast, prostate, cervix, lung, ovary or colon. CVSP17 DNA is used in gene therapy and in antisense therapy. The present sequence is human membrane-type serine protease MTSP1 (also called matriptase) protein. This sequence is used to illustrate the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                 The invention relates to type II membrane-type serine protease 9 (MTSP9) polypeptides and polynucleotides. MTSP belongs to type II transmembrane serine protease (TTSP) family. Sequences of the invention and their antibodies are useful for diagnosing, treating or preventing neoplastic disease in mammals. They are useful for monitoring tumour progression, inhibiting tumour initiation, growth or progression or treating malignant or pre-malignant conditions. Transgenic animals of the invention are useful in animal models of tumour initiation, growth and/or progression models. The invention is also useful in gene therapy. The present sequence is human membrane-type serine protease 1 (MTSP1). MTSP1 also referred as matriptase is a member of the TTSP family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New substantially purified single or two-chain type II membrane-type serine protease 9 (MTSP9) polypeptide, useful for monitoring tumor progression, inhibiting tumor initiation, or treating a malignant or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; type II membrane-type serine protease 9; tumour; transgenic; type II transmembrane serine protease; enzyme; gene therapy; WTSP9; neoplastic disease; transgenic animal; membrane-type serine protease

The methods and compositions of the invention are useful for diagnosing, preventing and/or treating conditions associated with the aberrant expression or activity of the CVSP14 polypeptide, such as cancers and malignancies of the breast, cervix, prostate, lung, ovary or colon. The methods are also useful for identifying compounds that will modulate the protease activity of CVSP14 polypeptide, and monitoring tumour progression and/or therapeutic effectiveness. CVSP14 DNA used in gene therapy. The present sequence is human membrane-type serine protease, MTSP1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 855 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New purified CVSP14 polypeptide and encoding nucleic acid molecule, useful for diagnosing, preventing and/or treating disorders, such as cancers and malignancies of the breast, cervix, prostate, lung, ovary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2003-018938/01.

The invention relates to novel human type II transmembrane serine protein 20 (MTSP20) (see ABP72374) and nucleic acids encoding it (see ABE58499). Also claimed are methods of inhibiting tumour initiation, growth or progression by inhibiting MTSP20 activity, and of treating or preventing a disease or disorder associated with undesired and/or uncontrolled angiogenesis or neovascularisation, especially undesired angiogenesis associated with solid neoplasms, vascular malformations and cardiovascular disorders, chronic inflammatory diseases, aberrant wound repairs, circulatory disorders, crest syndromes, dermatological disorders and ocular disorders using an inhibitor of MSP20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New type-II membrane-type serine protease 20 polypeptides, useful for preparing a medicament for diagnosing, treating or preventing cancer, dermatological disorders, aberrant wound repairs or crest syndromes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         03-JUL-2001; 2001US-0302939P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; transmembrane serine protease 1; MTSP1; MTSP20; enzyme;

The invention relates to human type I transmembrane serine protease 25 (MTSP25; ADB97565) and polypeptides derived from it (e.g., ADB97555). The CR (MTSP25 gene is located on chromosome 12. MTSP25 is a serine protease comprising an A chain and a B chain linked by a disulphide bond. MTSP25 is expressed or is active in tumour cells, and can therefore be used as a clasmostic marker for certain cancers. The invention also encompasses complete acids encoding an MTSP25 polypeptide (ADB9754, ADB9757), and clastic acids encoding an MTSP25 polypeptide (ADB97564, ADB9757), and clastic acids encoding an and host cells comprising an MTSP25 polypucleotide; a MTSP25 knockout animal; and an antibody specific for ceither the single chain (zymogen) or two-chain (activated) form of MTSP25. MTSP25 polypeptides are useful in diagnosing, preventing or treating neoplastic diseases, such as cancer of the breast, cervix, prostate, lung, ovary or colon. MTSP25 polypeptides may also be used for identifying compounds that modulate the protease activity of the color and for monitoring tumour progression and/or therapeutic effectiveness. The present sequence represents the related protein, MTSP1 (also known as matriptase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                  The invention comprises a conjugate that consists of a therapeutic agent and a peptide substrate (optionally linked via linker). The peptide substrate is proteolytically cleaved by a cell surface protease prasoluble, released or shed form of it, to liberate the therapeutic agent, the conjugate of the invention is not substrantially cleaved by plasmin or protease specific antigen (PSA). The conjugate of the invention is useful for treating a cell-surface protease-associated disease such as: cancer, ocular diseases, cardiovascular diseases, chronic inflammatory diseases, wounds, circulatory disorders, dermatological disorders, rheumatoid arthritis, psoriasis, diabetic retinopathies, recurrence of pterygium, scarring from excimer laser surgery, scarring from glaucoma filtering surgery, macular degeneration, crest syndromes, solid neoplasms, vascular tumours, melanoma and Kaposi's sarcoma. The present amino acid sequence represents a human cell surface protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cell-surface protesse-associated disease; cancer; ocular disease; cardiovascular disease; chronic inflammatory disease; wound; circulatory diseate; chronic inflammatory disease; wound; circulatory diseater; dermatological disorder; retenuatorial arthritis; psoriasis; diabetic retinopathy; pterygium; excimer laser surgery scarring; glaucoma filtering surgery scarring; macular degeneration; crest syndrome; solid neoplasm; vascular tumour; melanoma; Kaposi's sarcoma; human; cell surface protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel conjugate useful for treating cell-surface protease-associated disease, comprises a therapeutic agent and a peptidic or nucleic acis substrate linked to it optionally by a peptidic linker.
                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human cell surface

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a human type II membrane-type serine protease 1 (MTSP1). The MTSP1 protein sequence was used in the isolation of the coding sequence of MTSP12, which has been isolated to chromosome 19. CC MTSP12 does not include the sequence of amino acids Arg-Lys-His-Leu-Pro-Arg-Pro-Ala ADG65347. The MTSP12 coding sequence was identified by using the protein sequence of the protease domain of MTSP1 to search the human CC MTGS database which produced three serine proteases, MTSP12-PD1, MTSP12-PD3. EST's were identified which matched portions of MTSP12-PD1, MTSP12-PD3 and MTSP12-PD3. MTSP12-

                                                                                                                                                                                                                                                                                                       The present sequence is the protein sequence of human MTSP1 (matriptase), a serine protease that is expressed in epithelial cancer and normal tissue. In an example from the invention, the protein sequence of the protease domain of MTSP1 was used to search a human genome database. A protease was identified and designated serine protease 16 or CVSP16. CVSP16 CDNA ADI28863 was subsequently cloned from a human liver CDNA library by PCR. CVSP16 polypeptides exhibit protease activity as a single chain or as a multi-chain form. Methods are provided for identifying compounds that modulate the protease activity. CVSP16 polypeptides also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New serine protease 16 polypeptides, useful for diagnosing, preventing treating cancer (e.g. breast cancer) or for identifying compounds that may be used for modulating the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; SEQ ID NO 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          02-JUL-2002; 2002US-0394347P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-JUL-2003; 2003WO-US020959

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC optionally through a linker or peptidic linker, where the peptidic CC substrate is proteolytically cleaved by a cell surface protease or a CC soluble, released or shed form conjugate to liberate the agent and the CC conjugate is not substantially cleaved by plasmin or prostate specific CC involves administering a conjugate to a subject, where the disease is CC preferably a proliferative diseases or a cell-surface protease-associated CC disease. The diseases include autoimmune diseases, inflammatory diseases, CC infectious diseases and endocrine diseases. The conjugate is useful for treating a cell-surface protease-associated disease, which involves administering a conjugate comprising an agent and a peptidic substrate to CC a subject exhibiting symptoms of a cell-surface protease-associated CC as subject exhibiting symptoms of a cell-surface protease-associated CC as subject exhibiting symptoms of a cell-surface protease-associated CC cardiovascular disorders, chronic inflammatory diseases, wounds, CC cardiovascular disorders, dermatological disorders, restenosis, rheumatoid CC cardivitis, psoriasis, diabetic retinopathies, scarring from laser CC curgery, scarring from glaucoma filtering surgery, macular degeneration, CC CREST syndrome, bacterial infections, viral diseases, solid neoplasms and CC wascular tumours such as lung cancer, colon cancer, solid neoplasms and color protease (MTSP) polypeptide of the invention.

CC AAM25963. The proteins can have activities based on the tissues and cells CC they are expressed in, such as: antiinflammatory; antirheumatic; CC antiarthricic; immunosuppressive; antibacterial; endocrine; cardiant; CC cardiovascular; antianaemic; antiangergant; haemostatic; vulnerary; CC cardiovascular; antianaemic; antiaggregant; haemostatic; vulnerary; CC antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; CC antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; CC antiparkineonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine componists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, CC rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, canaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, costeoporosis, severe combined immunodeficiency, eczema, allergic costeoporosis, stevene combined immunodeficiency, eczema, allergic combined immunodeficiency, eczema, allergic continitis, asthma, diabetes, cancer, multiple sclerosis, depression, alicerres disease, Parkinson's disease, neurodegenerative and Sequence 851 AA; neurological disorders
